re:VISION
Laser & Cataract

Refractive Lens Exchange (RLE)

The game changer for golf

Laser & Cataract
See better, play better!

If you're over 45 and finding it harder to play with glasses or contacts, or you are not seeing as well as you used to, Refractive Lens Exchange could be your solution.

Refractive Lens Exchange (RLE) is a painless vision correction procedure that replaces your aging natural lens with a premium modern intraocular lens.

Sharper focus on the course

See better on the golf course – from the ball to the pin – without glasses or contact lens.

Freedom from glasses & contacts

Enjoy better vision with significantly less need for glasses for golf, travel, driving and everyday life.

Premium vision at all distances

Modern RLE lenses provide better vision without glasses at a range of distances – come and see us for an in-depth assessment and discussion about what type of vision you can achieve.

Quick recovery, long-lasting results

Return to normal activities quickly with life-changing results. Many factors affect what vision you can achieve – including the type of eyesight problem you have before the procedure, and any previous eye surgery can affect the outcome.

Call us for a personalized discussion of what is possible in your case and we can advise what level of independence from glasses you can expect to achieve. Good Distance vision without glasses for sports is generally expected.

Why Golfers Choose RLE

- Easier to track the ball and read the greens
- Better brightness and contrast
- Ideal for active lifestyles and travel
- Better near vision without glasses
- A proven and safe alternative to laser surgery for over 45s

Book Your Consultation Today

Take the first step to better vision and better golf! Call us for a phone consultation anytime if you would like to find out more.
